Sheetal Khadanga

QA Engineer – Test Automation, Full Stack & AI

Portfolio · +91-6370090768

Experience

- **Zenalyst.ai** Bangalore
  QA Engineer *Aug 2025 – Oct 2026*
  - Built an end-to-end automation framework in Playwright (JavaScript) with 95 test suites and 700+ test cases covering login, RBAC, bank statements, customer receipts, classification rules, scheduler, data sources, chatbot and group/SPV modules of a financial analytics SaaS platform.
  - Structured tagged smoke, regression and module-wise suites with session-reuse login setup, enabling targeted runs on both staging and production.
  - Automated test reporting with ExcelJS and Nodemailer / Azure Communication Email – a combined email after every run with an Excel report, embedded failure screenshots and links to HTML reports.
  - Identified, reproduced and documented production defects across financial workflows; kept automation aligned with UI changes to reduce false failures.
  - Worked beyond the QA role in a fast-paced startup environment, contributing to frontend and backend features and bug fixes; also performed manual, functional, regression and API testing (Postman).

Skills

Testing: Playwright, API Testing (Postman), Security (RBAC/IDOR), Accessibility (axe), Performance (k6), Manual / Functional / Regression, Test Case Design
Languages: JavaScript, Java, Python, SQL, HTML, CSS
Frontend: React, Bootstrap, Tailwind CSS, JSP
Backend: Spring Boot, Spring MVC, Hibernate, Node.js, Flask
GenAI: LLM Integration (Claude API), Prompt Engineering
Databases: MySQL, Oracle
DevOps & Tools: Git, GitHub Actions, Postman, VS Code, Eclipse

Projects

- TestPilot AI – Built a full-stack AI test case generator that turns user stories into positive, negative and edge-case test cases with the Claude API, exports formatted Excel suites and generates Playwright scripts. React UI, Spring Boot 4 REST API with JWT and owner-scoped data, MySQL with Flyway, and a Python FastAPI AI engine with structured JSON output and a mock mode. Covered by 261 automated tests (JUnit, pytest, Playwright UI/API/security/accessibility/visual) plus k6 performance tests, 99% service coverage, Docker and a 6-job GitHub Actions CI pipeline.
- Tune Hub – Built a music streaming web app with personalized playlists and membership plans using Java, Spring Boot, Spring MVC, Hibernate and MySQL in a layered (Controller–Service–Repository) architecture, with a responsive JSP/Bootstrap UI.
- Bigmart Sales Prediction – Built a machine learning model to forecast outlet-level product sales, with data cleaning and feature engineering in Pandas/NumPy, served through a Flask web app for instant predictions.

Education

NIST Institute of Science and Technology – Master of Computer Applications (2021 – 2023)
Presidency College, Berhampur – Bachelor of Computer Applications (2018 – 2021)
KodNest Technologies – Full Stack Java Development Training (2023 – 2024)
